About the Spindle Kit

The Spindle Kit includes a cylindrical laser. The laser transmitter is placed into a chuck or in the bore of the spindle so that the laser beam is projected along the rotational centerline of the machine. The Microgage PRO receiver is secured to the tool holder, tail-stock or mounted in the bore of an opposing spindle to catch the laser beam.

The PRO series includes a smart display with touchscreen technology and can also be wireless. Pinpoint Laser Systems are simple, rugged and portable.
