

### Adjustable Microshim

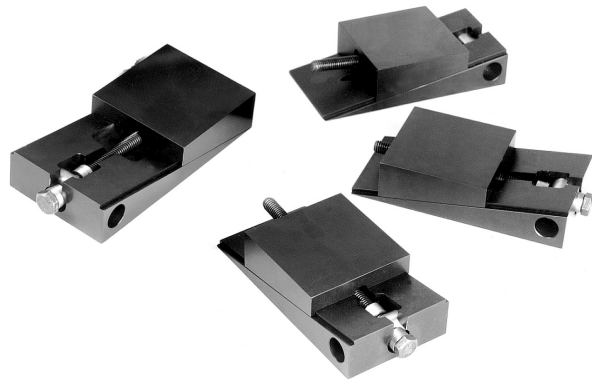

The adjustable microshim is a precision machinery shim for adjusting height and leveling large and heavy production machinery. Height adjustments as small as 0.001 inch are easily made by turning the adjustment bolt. The Microshim provides a working range of 0.60 inch with a load-carrying capacity of 10,000 pounds. The Microshim is ideal for aligning machine tools, leveling surface plates, adjusting long production equipment, supporting heavy machinery, and much more. It's also adjustable, eliminating the need for jack bolts and spacer blocks. Adding a bonding agent to the surfaces locks the Microshim in a permanent height position, if required.

The adjustable microshim is a very useful add-on when using the Laser Microgage Alignment Systems.

### Features:

- 0.001 inch precision
- 0.5 inch height range
- 10,000 lbs. load capacity
- Adjustable from 1.125" to 1.725"
- Base Size 3" W x 6" L
- Hard, anodized coating
- 1 Year Warranty/Product Support

### Applications:

- Adjusting machinery height
- Leveling granite surface plates
- Aligning metalworking tools
- Positioning heavy assemblies
- Mill & web assembly leveling
- Adjusting press & roll systems
